

AP 10454

**Claim Rejections – 35 USC § 102**

The examiner asserted that claims 11 as amended on September 17, 2007, contained new subject matter which had not been disclosed in the original claims or in the specification.

Applicant disagrees. One passage cited by the examiner, page 2, line 4 of the specification, reads that the fuse bridge contains or is made of a basic material with a melting point lower than the melting point of the material of which the strip conductors are made. If it examiner's interpretation of the language were correct, this passage would mean that the material "comprises or comprises" a basic material with the lower melting point. This would be redundant and would not make sense. If something is made of a material (as opposed to made with a material), it consists of that material. Accordingly, the meaning of the sentence is that the bridge comprises or consists of the material. A pencil is not made of graphite. It is made with graphite.

Applicant also refers to the German-language original PCT application, published as WO 2004/002202. The corresponding language of the German text reads,

" Bezüglich der Leiterplatte wird diese Aufgabe erfindungsgemäß dadurch gelöst, dass mindestens eine der Versorgungsleiterbahnen eine Unterbrechung aufweist, welche mit einer Schmelzbrücke leitend überbrückt ist, wobei die Schmelzbrücke ein Basismaterial enthält oder aus diesem besteht, welches einen Schmelzpunkt aufweist, welcher niedriger ist als der Schmelzpunkt des Materials, aus dem die Leiterbahnen bestehen."

(See page 1 last paragraph to line 2 on page 2).

The submitted translation in the present application of the underlined words reads "contains or is made of a basic material." The term "made of" was used to translate the verb "aus [...] besteht." However "bestehen aus" (infinitive of the verb) means "to consist of," not "to comprise." Reference is made to De Vries and Herrmann, *German-English Technical and Engineering Dictionary*, Second Edition, McGraw-Hill

AP 10454

1966. On page 175, the verb *bestehen* (lowercase entry in dictionary) and the participle *bestehend* (consisting) are listed. The preposition "aus" is only mentioned under the participle, where the translation is given as "consisting of." The meaning of "comprise" would be reflected by the verb *umfassen*, not by *bestehen aus*. (see page 1029 of the same dictionary). But the verb was not the one used.

The present application is National Phase of the PCT application. Accordingly, the language of claim 11 was disclosed in the specification.

The other quotes provided by the examiner describe optional additional features, not necessary ones. The description of the embodiment is not limiting. The drawing would not look any different if the embodiment were not coated with solder.

Claim 11 was rejected under 35 as being anticipated by Krueger. As explained in the previous amendment, Krueger's bridge does not consist of lower-melting material. Additionally, Krueger's fuse does not have a gap or break that is bridged. Krueger applies the lower-melting material on top of the conductor material. The strips 136 (Fig.3) , 135 (Fig. 4) and 85 (Fig. 5) all designate continuous connecting conductor strips whose melting point as such is not lower. They becomes fusible only in the locations of the additional application of the second conductive layer 138 due to the "M-effect" according to column 6, lines 10-15. This means that in the locaton of the fuse, there are always two materials present. In the present invention, this is not necessary. The ends of the fusible bridge may be connected to the conductor material using a regular soldering alloy, but there is no need to use soldering alloy at all or to have a second material between the ends of the fuse bridge, i.e. the actual melting location.

Claim 11 as previously presented is thus believed to be patentable.

#### **Claim Rejections – 15 USC § 103**

Claims 16, 17 and 20 were rejected under 35 U.S.C. 103 (a) as being unpatentable over Krueger et al. in view of Montgomery et al.

AP 10454

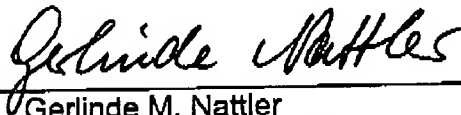

Claims 16 and 17 depend on amended claim 11 and are thus believed to be patentable.

The arguments made with reference to claim 11 apply to claim 20 as well. Accordingly, claim 20 is believed to be patentable.

### **CONCLUSION**

Accordingly, Applicant believes that the rejections do not apply to the claims as presented in the amendment of September 17, 2007 overcome the rejections.

Respectfully submitted,

---

**GERMAN-ENGLISH  
TECHNICAL  
ENGINEERING  
Second Edition**

*By Louis De Vries  
Theo M. Herrmann*

This international dictionary has been a work in its field. It is the engineer, the translator, and the English translator. It contains technical and engineering terms. Spelling and engineering terms in the following fields are covered: construction, electronics, mathematics, radio, and television.

The Second Edition is a comprehensive dictionary of terms, approximately the same as the First Edition. It contains new entries replacing the original edition.

Much of the wide range of professional language appears for the first time in this dictionary. Terms in astronautics, automatic navigation, steering-control systems, and completely new, recently coined words and developments in physics, space flight, and related fields are included. Many of the contributors directed

"I shall not think my employment  
useless or ignoble if . . . my labors  
afford light to the repositories of  
science."
